Rewrite Sums Using Distributive Property with GCF-(6.NS.4)

1.4 Lesson

Key Idea

Distributive Property

Words To multiply a sum or difference by a number, multiply each number in the sum or difference by the number outside the parentheses. Then evaluate.

Numbers $3(7 + 2) = 3 \times 7 + 3 \times 2$

$$3(7 - 2) = 3 \times 7 - 3 \times 2$$

Algebra $a(b + c) = ab + ac$

$$a(b - c) = ab - ac$$

EXAMPLE 1 Using Mental Math

Use the Distributive Property and mental math to find 8×53 .

$$8 \times 53 = 8(50 + 3)$$

Write 53 as $50 + 3$.

$$= 8(50) + 8(3)$$

Distributive Property

$$= 400 + 24$$

Multiply.

$$= 424$$

Add.

Indicator 3 Class Notes by Mrs. Joshi

How do you create an equivalent expression showing the GCF of two addends using the Distributive Property?

For example, how can the Distributive Property help us to write an equivalent expression using the GCF for $24 + 9$?

Factors of 24 and 9 are:

Using 3 as the GCF and Distributive Property

$$\begin{array}{l} \underline{24} \\ 1 \times 24 \\ 2 \times 12 \\ \underline{3 \times 8} \\ 4 \times 6 \end{array} \quad \begin{array}{l} \underline{9} \\ 1 \times 9 \\ \underline{3 \times 3} \end{array}$$

$$\begin{array}{l} 24 + 9 \\ (3 \times 8) + (3 \times 3) \\ 3(8 + 3) \end{array}$$

GCF of 24 and 9 = 3

Factors of 24 = (1, 2, 3, 4, 6, 8, 12, 24)
Factors of 9 = (1, 3, 9)

Indicator 3 Class Notes by Mrs. Joshi

How can the Distributive Property help us to write an equivalent expression using the GCF for $15 + 45$?

$$\begin{array}{r} 15 \\ 1 \times 15 \\ \hline 3 \times 5 \end{array}$$

$$\begin{array}{r} 45 \\ 1 \times 45 \\ 3 \times 15 \\ \hline 5 \times 9 \end{array}$$

$$15 + 45 \\ (1 \times 15) + (3 \times 15)$$

$$15 + 45 = 15(1 + 3)$$

GCF of 15 and 45 = 15

Apply the distributive property to factor out the greatest common factor.

$$35 + 50 = \boxed{}$$

5 is the greatest common factor of 35 and 50.

$$35 + 50$$

$$= 5 \cdot 7 + 5 \cdot 10$$

$$= 5(7 + 10) \quad \text{Apply the distributive property.}$$

The answer:

$$5(7 + 10)$$

Indicator 3 Class Notes by Mrs. Joshi

Apply the distributive property to factor out the greatest common factor.

$$9 + 15 = \boxed{}$$

3 is the greatest common factor of 9 and 15.

$$9 + 15$$

$$= 3 \cdot 3 + 3 \cdot 5$$

$$= 3(3 + 5) \quad \text{Apply the distributive property.}$$

The answer:

$$3(3 + 5)$$

Indicator 3 Class Notes by Mrs. Joshi

Apply the distributive property to factor out the greatest common factor.

$$12 + 20 = \boxed{}$$

4 is the greatest common factor of 12 and 20.

$$12 + 20$$

$$= 4 \cdot 3 + 4 \cdot 5$$

$$= 4(3 + 5) \quad \text{Apply the distributive property.}$$

The answer:

$$4(3 + 5)$$

Apply the distributive property to factor out the greatest common factor.

$$24 + 28 = \boxed{}$$

4 is the greatest common factor of 24 and 28.

$$24 + 28$$

$$= 4 \cdot 6 + 4 \cdot 7$$

$$= 4(6 + 7) \quad \text{Apply the distributive property.}$$

The answer:

$$4(6 + 7)$$

Indicator 3 Class Notes by Mrs. Joshi

Apply the distributive property to factor out the greatest common factor.

$$35 + 14 = \boxed{}$$

7 is the greatest common factor of 35 and 14.

$$35 + 14$$

$$= 7 \cdot 5 + 7 \cdot 2$$

$$= 7(5 + 2) \quad \text{Apply the distributive property.}$$

The answer:

$$7(5 + 2)$$

Apply the distributive property to factor out the greatest common factor.

$$44 + 48 = \boxed{}$$

4 is the greatest common factor of 44 and 48.

$$44 + 48$$

$$= 4 \cdot 11 + 4 \cdot 12$$

$$= 4(11 + 12) \quad \text{Apply the distributive property.}$$

The answer:

$$4(11 + 12)$$

Indicator 3 Class Notes by Mrs. Joshi

Apply the distributive property to factor out the greatest common factor.

$$15 + 21 = \boxed{}$$

3 is the greatest common factor of 15 and 21.

$$15 + 21$$

$$= 3 \cdot 5 + 3 \cdot 7$$

$$= 3(5 + 7) \quad \text{Apply the distributive property.}$$

The answer:

$$3(5 + 7)$$

Apply the distributive property to factor out the greatest common factor.

$$55 + 35 = \boxed{}$$

5 is the greatest common factor of 55 and 35.

$$55 + 35$$

$$= 5 \cdot 11 + 5 \cdot 7$$

$$= 5(11 + 7) \quad \text{Apply the distributive property.}$$

The answer:

$$5(11 + 7)$$

Indicator 3 Class Notes by Mrs. Joshi

Apply the distributive property to factor out the greatest common factor.

$$6 + 30 = \boxed{}$$

6 is the greatest common factor of 6 and 30.

$$6 + 30$$

$$= 6 \cdot 1 + 6 \cdot 5$$

$$= 6(1 + 5) \quad \text{Apply the distributive property.}$$

The answer:

$$6(1 + 5)$$

Apply the distributive property to factor out the greatest common factor.

$$4 + 10 = \boxed{}$$

2 is the greatest common factor of 4 and 10.

$$4 + 10$$

$$= 2 \cdot 2 + 2 \cdot 5$$

$$= 2(2 + 5) \quad \text{Apply the distributive property.}$$

The answer:

$$2(2 + 5)$$

Indicator 3 Class Notes by Mrs. Joshi

Apply the distributive property to factor out the greatest common factor.

$$90 + 27 = \boxed{}$$

9 is the greatest common factor of 90 and 27.

$$90 + 27$$

$$= 9 \cdot 10 + 9 \cdot 3$$

$$= 9(10 + 3) \quad \text{Apply the distributive property.}$$

The answer:

$$9(10 + 3)$$

Apply the distributive property to factor out the greatest common factor.

$$75 + 20 = \boxed{}$$

5 is the greatest common factor of 75 and 20.

$$75 + 20$$

$$= 5 \cdot 15 + 5 \cdot 4$$

$$= 5(15 + 4) \quad \text{Apply the distributive property.}$$

The answer:

$$5(15 + 4)$$

Indicator 3 Class Notes by Mrs. Joshi

Apply the distributive property to factor out the greatest common factor.

$$16 + 36 = \boxed{}$$

4 is the greatest common factor of 16 and 36.

$$16 + 36$$

$$= 4 \cdot 4 + 4 \cdot 9$$

$$= 4(4 + 9) \quad \text{Apply the distributive property.}$$

The answer:

$$4(4 + 9)$$

Apply the distributive property to factor out the greatest common factor.

$$56 + 32 = \boxed{}$$

8 is the greatest common factor of 56 and 32.

$$56 + 32$$

$$= 8 \cdot 7 + 8 \cdot 4$$

$$= 8(7 + 4) \quad \text{Apply the distributive property.}$$

The answer:

$$8(7 + 4)$$

Indicator 3 Class Notes by Mrs. Joshi

EXAMPLE 2 Simplifying Algebraic Expressions

Use the Distributive Property to simplify the expression.

a. $4(n + 5)$

$$\begin{aligned} 4(n + 5) &= 4(n) + 4(5) && \text{Distributive Property} \\ &= 4n + 20 && \text{Multiply.} \end{aligned}$$

b. $12(y - 3)$

$$\begin{aligned} 12(y - 3) &= 12(y) - 12(3) && \text{Distributive Property} \\ &= 12y - 36 && \text{Multiply.} \end{aligned}$$

EXAMPLE 3 Standardized Test Practice

Which expression is equivalent to $9(6 + x + 2)$?

- (A) $9x + 8$ (B) $9x + 54$ (C) $9x + 56$ (D) $9x + 72$

$$\begin{aligned} 9(6 + x + 2) &= 9(6) + 9(x) + 9(2) && \text{Distributive Property} \\ &= 54 + 9x + 18 && \text{Multiply.} \\ &= 9x + 54 + 18 && \text{Commutative Property of Addition} \\ &= 9x + 72 && \text{Add 54 and 18.} \end{aligned}$$

❖ The correct answer is (D).

Indicator 3 Class Notes by Mrs. Joshi

EXAMPLE 4 Real-Life Application

José is x years old. His brother, Felipe, is 2 years older than José. Their aunt, Maria, is three times as old as Felipe. Write and simplify an expression that represents Maria's age in years.

Name	Description	Expression
José	He is x years old.	x
Felipe	He is 2 years <i>older</i> than José. So, <i>add</i> 2 to x .	$x + 2$
Maria	She is three <i>times</i> as old as Felipe. So, <i>multiply</i> 3 and $(x + 2)$.	$3(x + 2)$

$$3(x + 2) = 3(x) + 3(2)$$

Distributive Property

$$= 3x + 6$$

Multiply.

❖ Maria's age in years is represented by the expression $3x + 6$.
